### SC-25.09 Shotcrete Robot

SC-25. 09 shotcrete robot is a special mechanized equipment independently developed by NANCHANG KAMACH MINING CO., LTD. for metal mines, tunneling and other support work, which integrates walking, concrete pumping and spraying, and has the remarkable characteristics of flexible construction operations, high efficiency, safety and reliability.

- 1. Multi-degree hydraulic-driven spray arm design, with LoS wireless remote control, can easily achieve extension, rotation, pitch and spraying of the arm, with wide coverage and convenient operation
- 2. The hopper is equipped with a hydraulic drive agitator and an adjustable electric agitator grille for easy pumping, cleaning and maintenance.
- 3. Standard electric drive screw-type air compressor, additive pumping system using screw quick-condensing agent pump, PLC control, according to the change of concrete flow rate in proportion to synchronously adjust the output flow, so that it can achieve the optimal ratio.

4. Central articulated-chassis, four-wheel drive, suitable for working in narrow underground roadways and tunnels. The power transmission system adopts a full set of imported EFI turbocharged engine, hydraulic shift transmission and wet brake axle, equipped with spring-pressured brake, hydraulic release brake, the braking performance is safe and reliable.

5. The layout of the whole vehicle is reasonable, and maintenance convenient.
